SUPER-ANGULON 5.6/38 XL 120°

Photographers always dream of a shorter focal length lens. The Super-Angulon XL 5.6/38 was designed to fill that dream. Medium format photographers will find this new lens extremely useful. This new Super-Angulon XL 38mm has an impressive 120 degree field angle at f/22, an image circle of 137mm. This high precision design and optical calculation yielded a back-focal distance of 52.1mm without any loss in resolution or contrast. This is important because it provides the largest possible image circle for the Super-Angulon XL 5.6/38.

Designed to cover the 6 x 7cm and 6 x 9 cm formats, this lens also covers the 6 x 12cm panoramic format. This lens is ideal for architectural photographers using medium format view cameras as well as landscape photographers looking for a wide perspective. The lens is available in Copal #0 shutter.

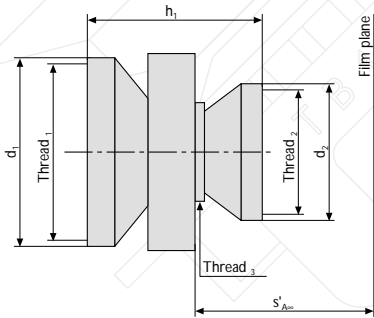

Accessories

Centerfilter: 11a (2 f-stops)

Art. no.: 45385

Helical mount

Art. no.: 45757
